INDIANAPOLIS

OFFICE MEMORANDUM

DATE: February 12, 1986

THRU: Thomas L. Russell TR 2/17/86

TO: Robert D. Malone
Enforcement SectionFROM: Jack C. Corpuz, Chief *jc 2/14/86*
Chemical Evaluation Section

EPA Region 5 Records Ctr.

305945

SUBJECT: Johnson Controls

I have reviewed the data presented by Johnson Controls and am assured that their cleanup has been adequate. The data presented has shown levels of contamination at the excavated area and levels up to three feet below the break. Unfortunately, we have no way of knowing how long this situation was occurring, and their testing only verifies that the immediate area around the excavation is clean, not what impact it may have had on the groundwater.

In this particular case, I would suggest shipment of the contaminated (hazardous) soil to Adams Center as soon as possible. Further testing will probably not be beneficial, and they have proven the area around the break to be "clean."
